

NumPy Cheat Sheet

This cheat sheet offers a quick and practical reference for essential NumPy commands, focusing on array creation, manipulation, and analysis, using examples drawn from the [NYC Taxis Dataset](#). It covers critical topics such as importing data from files, creating and reshaping arrays, and performing scalar and vector math.

You'll also find easy-to-follow instructions on inspecting array properties, combining and splitting arrays, Boolean filtering, and computing statistics like mean, variance, and standard deviation. Whether you're analyzing 1D or 2D arrays, this cheat sheet helps you leverage NumPy's capabilities for efficient data handling.

Designed to be clear and actionable, this reference ensures that you can quickly apply NumPy's powerful array operations in your data analysis workflow.

Table of Contents

-  **Importing Data**
IMPORT, LOADTXT, GENFROMTXT, SAVETXT
-  **Creating Arrays**
ARRAY, ZEROS, ONES, EYE, LINSPACE, ARANGE, FULL, RANDOM
-  **Inspecting Properties**
SIZE, SHAPE, DTYPE, ASTYPE, TOLIST, INFO
-  **Copying, Sorting, & Reshaping**
COPY, VIEW, SORT, FLATTEN, T, RESHAPE, RESIZE
-  **Adding & Removing Elements**
APPEND, INSERT, DELETE
-  **Combining & Splitting**
CONCATENATE, SPLIT, HSPLIT
-  **Indexing & Slicing**
INDEXING, SLICING, CONDITIONAL STATEMENTS

-  **Scalar Math**
ADD, SUBTRACT, MULTIPLY, DIVIDE, POWER
-  **Vector Math**
ADD, SUBTRACT, MULTIPLY, DIVIDE, POWER, ARRAY_EQUAL, SQRT, SIN, LOG, ABS, CEIL, FLOOR, ROUND
-  **Statistics**
MEAN, SUM, MIN, MAX, VAR, STD, CORRCOEF
-  **Working with Data**
CREATING NDARRAYS, CONVERTING A LIST OF LISTS, SELECTING ROWS/COLUMNS, VECTOR OPERATIONS, STATISTICS FOR 1D/2D NDARRAYS, CREATING AN NDARRAY FROM CSV FILE, WORKING WITH BOOLEAN ARRAYS, ASSIGNING NDARRAY VALUES

⬇ Importing Data

Syntax for	How to use	Explained	Syntax for	How to use	Explained
IMPORT	<pre>import numpy as np</pre>	Imports NumPy using its standard alias, <code>np</code>	LINSPACE	<pre>arr = np.linspace(0, 100, 6)</pre>	Array of 6 evenly divided values from 0 to 100 (<code>[0, 20, 40, 60, 80, 100]</code>)
LOADTXT	<pre>np.loadtxt('file.txt')</pre>	Create an array from a <code>.txt</code> file	ARANGE	<pre>arr = np.arange(0, 10, 3)</pre>	Array of values from 0 to less than 10 with step 3 (<code>[0, 3, 6, 9]</code>)
GENFROMTXT	<pre>np.genfromtxt('file.csv', delimiter=',')</pre>	Create an array from a <code>.csv</code> file	FULL	<pre>arr = np.full((2, 3), 8)</pre>	2x3 array with all values set to 8
SAVETXT	<pre>np.savetxt('file.txt', arr, delimiter=' ')</pre>	Writes an array to a <code>.txt</code> file	RAND	<pre>arr = np.random.rand(4, 5)</pre>	4x5 array of random floats between 0 and 1
	<pre>np.savetxt('file.csv', arr, delimiter=',')</pre>	Writes an array to a <code>.csv</code> file		<pre>arr = np.random.rand(6, 7) * 100</pre>	6x7 array of random floats between 0-100
			RANDINT	<pre>arr = np.random.randint(5, size=(2, 3))</pre>	2x3 array with random integers between 0 and 4

cube Creating Arrays

Syntax for	How to use	Explained
ARRAY	<pre>arr = np.array([1, 2, 3])</pre>	Create a 1D array
	<pre>arr = np.array([(1, 2, 3), (4, 5, 6)])</pre>	Create a 2D array
ZEROS	<pre>arr = np.zeros(3)</pre>	1D array of length 3; all values set to 0
ONES	<pre>arr = np.ones((3, 4))</pre>	3x4 array with all values set to 1
EYE	<pre>arr = np.eye(5)</pre>	5x5 array of 0 with 1 on diagonal (identity matrix)

🔍 Inspecting Properties

Syntax for	How to use
ASTYPE	<code>arr.astype(dtype)</code>
TOLIST	<code>arr.tolist()</code>
INFO	<code>np.info(np.eye)</code>
SIZE	<code>arr.size</code>
SHAPE	<code>arr.shape</code>
DTYPE	<code>arr.dtype</code>

Explained
Convert <code>arr</code> elements to type <code>dtype</code>
Convert <code>arr</code> to a Python list
View documentation for <code>np.eye</code>
Returns number of elements in <code>arr</code>
Returns dimensions of <code>arr</code> (rows, columns)
Returns type of elements in <code>arr</code>

Syntax for	How to use	Explained
COPY	<code>np.copy(arr)</code>	Copies <code>arr</code> to new memory
VIEW	<code>arr.view(dtype)</code>	Creates view of <code>arr</code> elements with type <code>dtype</code>
SORT	<code>arr.sort()</code>	Sorts <code>arr</code>
SORT	<code>arr.sort(axis=0)</code>	Sorts specific axis of <code>arr</code>
FLATTEN	<code>two_d_arr.flatten()</code>	Flattens 2D array <code>two_d_arr</code> to 1D
T	<code>arr.T</code>	Transposes <code>arr</code> (rows become columns and vice versa)
RESHAPE	<code>arr.reshape(3, 4)</code>	Reshapes <code>arr</code> to 3 rows, 4 columns without changing data
RESIZE	<code>arr.resize((5, 6))</code>	Changes <code>arr</code> shape to 5x6 and fills new values with 0

Adding & Removing Elements

Syntax for	How to use
APPEND	<code>np.append(arr, values)</code>
INSERT	<code>np.insert(arr, 2, values)</code>
DELETE	<code>np.delete(arr, 3, axis=0)</code>
	<code>np.delete(arr, 4, axis=1)</code>

Explained
Appends values to end of <code>arr</code>
Inserts values into <code>arr</code> before index 2
Deletes row on index 3 of <code>arr</code>
Removes the 5th column from <code>arr</code>

Combining & Splitting

Syntax for	How to use
CONCATENATE	<code>np.concatenate((arr1, arr2), axis=0)</code>
	<code>np.concatenate((arr1, arr2), axis=1)</code>
SPLIT	<code>np.split(arr, 3)</code>
HSPLIT	<code>np.hsplit(arr, 5)</code>

Explained
Adds <code>arr2</code> as rows to the end of <code>arr1</code>
Adds <code>arr2</code> as columns to end of <code>arr1</code>
Splits <code>arr</code> into 3 sub-arrays
Splits <code>arr</code> horizontally on the index 5

Indexing & Slicing

Syntax for	How to use
INDEXING	<code>arr[5]</code>
	<code>arr[2, 5]</code>
	<code>arr[1] = 4</code>
	<code>arr[1, 3] = 10</code>

Explained
Returns the element at index 5
Returns the 2D array element on index [2][5]
Assigns array element on index 1 the value 4
Assigns array element on index [1][3] the value 10

Syntax for	How to use
SLICING	<code>arr[0:3]</code>
	<code>arr[0:3, 4]</code>
	<code>arr[:2]</code>
	<code>arr[:, 1]</code>
CONDITIONAL STATEMENTS	<code>arr < 5</code>

Explained
Returns the elements at indices 0, 1, 2
Returns the elements on rows 0, 1, 2 in column index 4
Returns the elements at indices 0, 1
Returns column index 1, all rows
Returns an array of boolean values

Indexing & Slicing

Syntax for	How to use	Explained	Syntax for	How to use	Explained
CONDITIONAL STATEMENTS	<code>(arr1 < 3) & (arr2 > 5)</code>	To be <code>True</code> , both must be <code>True</code>	ADD	<code>np.add(arr1, arr2)</code>	Elementwise add <code>arr1</code> to <code>arr2</code>
	<code>~arr</code>	Inverts a boolean array	SUBTRACT	<code>np.subtract(arr1, arr2)</code>	Elementwise subtract <code>arr2</code> from <code>arr1</code>
	<code>arr[arr < 5]</code>	Returns array elements less than 5	MULTIPLY	<code>np.multiply(arr1, arr2)</code>	Elementwise multiply <code>arr1</code> by <code>arr2</code>
	<code>(arr1 < 3) (arr2 > 5)</code>	To be <code>True</code> , at least one must be <code>True</code>	DIVIDE	<code>np.divide(arr1, arr2)</code>	Elementwise divide <code>arr1</code> by <code>arr2</code>
SCALAR MATH			MULTIPLY	<code>np.power(arr1, arr2)</code>	Elementwise, raise <code>arr1</code> to the power of <code>arr2</code>
			ARRAY_EQUAL	<code>np.array_equal(arr1, arr2)</code>	Returns <code>True</code> if the arrays have the same elements and shape
			SQRT	<code>np.sqrt(arr)</code>	Square root of each element in the array
			SIN	<code>np.sin(arr)</code>	Sine of each element in the array
			LOG	<code>np.log(arr)</code>	Natural log of each element in the array
			ABS	<code>np.abs(arr)</code>	Absolute value of each element in the array
			CEIL	<code>np.ceil(arr)</code>	Rounds up each element to the nearest integer

Scalar Math

Syntax for	How to use	Explained	Syntax for	How to use	Explained
ADD	<code>np.add(arr, 1)</code>	Add 1 to each array element	SQRT	<code>np.sqrt(arr)</code>	Square root of each element in the array
SUBTRACT	<code>np.subtract(arr, 2)</code>	Subtract 2 from each array element	SIN	<code>np.sin(arr)</code>	Sine of each element in the array
MULTIPLY	<code>np.multiply(arr, 3)</code>	Multiply each array element by 3	LOG	<code>np.log(arr)</code>	Natural log of each element in the array
DIVIDE	<code>np.divide(arr, 4)</code>	Divide each array element by 4 (returns <code>np.nan</code> for division by zero)	ABS	<code>np.abs(arr)</code>	Absolute value of each element in the array
POWER	<code>np.power(arr, 5)</code>	Raise each array element to the power of 5	CEIL	<code>np.ceil(arr)</code>	Rounds up each element to the nearest integer

✓ Vector Math

Syntax for How to use

FLOOR `np.floor(arr)`

ROUND `np.round(arr)`

Explained

Rounds down each element to the nearest integer

Rounds each element to the nearest integer

Working with Data

Syntax for How to use

CREATING NDARRAYS `import numpy as np
array_1d = np.array([1, 2, 3, 4, 5])
array_2d = np.array([[1, 2, 3], [4, 5, 6]])`

CONVERTING A LIST OF LISTS

```
import csv  
f = open("nyc_taxis.csv", "r")  
taxi_list = list(csv.reader(f))  
taxi = np.array(taxi_list)
```

Explained

Create a 1D or 2D `ndarray`

Convert a list of lists into a 2D `ndarray`

Statistics

Syntax for How to use

MEAN `np.mean(arr, axis=0)`

SUM `arr.sum()`

MIN `arr.min()`

MAX `arr.max(axis=0)`

VAR `np.var(arr)`

STD `np.std(arr, axis=1)`

CORRCOEF `arr.corrcoef()`

Explained

Returns mean of `arr` along specified axis

Returns the sum of elements in `arr`

Returns minimum value of `arr`

Returns maximum value of `arr` along specified axis

Returns the variance of `arr`

Returns the standard deviation of `arr` along specified axis

Returns correlation coefficient of `arr`

SELECTING ROWS

```
second_row = taxi[1]
```

```
all_but_first_row = taxi[1:]
```

```
fifth_row_second_column = taxi[4, 1]
```

SELECTING COLUMNS

```
second_column = taxi[:, 1]
```

```
second_third_columns = taxi[:, 1:3]  
cols = [1, 3, 5]  
second_fourth_sixth_columns = taxi[:, cols]
```

```
twod_slice = taxi[1:4, :3]
```

Select the second row in `taxi`

Select all rows from the second row onward in `taxi`

Select the element from the fifth row and second column in `taxi`

Select all values from the second column in `taxi`

Select the second and third columns, then the second, fourth, and sixth columns in `taxi`

Select a slice of rows 2 to 4 and columns 1 to 3 in `taxi`

Working with Data

Syntax for

VECTOR OPERATIONS

```
vector_a + vector_b
```

```
vector_a - vector_b
```

```
vector_a * vector_b
```

```
vector_a / vector_b
```

STATISTICS FOR 1D NDARRAYS

```
array_1d.min()
```

```
array_1d.max()
```

```
array_1d.mean()
```

```
array_1d.sum()
```

STATISTICS FOR 2D NDARRAYS

```
array_2d.max()
```

```
array_2d.max(axis=1) # returns a 1D ndarray
```

```
array_2d.max(axis=0) # returns a 1D ndarray
```

How to use

Explained

Element-wise addition of two `ndarray` objects

Element-wise subtraction of two `ndarray` objects

Element-wise multiplication of two `ndarray` objects

Element-wise division of two `ndarray` objects

Return the minimum value of `array_1d`

Return the maximum value of `array_1d`

Calculate the average of values in `array_1d`

Calculate the sum of the values in `array_1d`

Return the maximum value for the entire `array_2d`

Return the maximum value in each row in `array_2d`

Return the maximum value in each column in `array_2d`

Syntax for

CREATING AN NDARRAY FROM CSV FILE

WORKING WITH BOOLEAN ARRAYS

ASSIGNING NDARRAY VALUES

How to use

```
import numpy as np  
taxi = np.genfromtxt('nyc_taxis.csv',  
                     delimiter=',', skip_header=1)
```

```
np.array([2, 4, 6, 8]) < 5
```

```
a = np.array([2, 4, 6, 8])  
filter = a < 5  
a[filter] # returns [2, 4]
```

```
tip_amount = taxi[:, 12]  
tip_bool = tip_amount > 50  
top_tips = taxi[tip_bool, 5:14]
```

```
taxi[1066, 5] = 1  
taxi[:, 0] = 16  
taxi[550:552, 7] = taxi[:, 7].mean()
```

```
taxi[taxi[:, 5] == 2, 15] = 1
```

Explained

Load data from the `nyc_taxis.csv` file into an `ndarray`, skipping the header row

Create a Boolean array for elements less than 5

Use Boolean filtering to return elements less than 5 from an `ndarray`

Use Boolean filtering to return rows with `tip_amount > 50` and columns 6 to 14

Assign values to specific elements, a column, and a slice in `taxi`

Use Boolean indexing to assign a value of 1 in column index 15 to rows where the 6th column equals 2
